Creating a Stop Motion Video

Capturing frame by frame
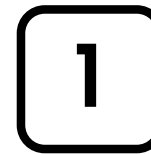

p

Each time you press the key **p** a new picture is being taken.
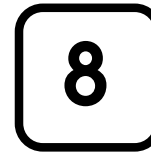

Creating a new project

n

Creating a new project will leave all existing frames and videos intact. It will start an empty folder that will be filled with new captured frames.

Rendering a video from single frames

1
...
8

You can render a video for the active project you are working with. The keys 1 to 7 will each render a video from all the frames you captured. Each key sets a different number for frames per second (fps).

1fps = key 1
3fps = key 2
5fps = key 3
10fps = key 4
15fps = key 5
20fps = key 6
25fps = key 7
30fps = key 8

Shutdown the machine

q

This will shutdown the Raspberry Pi gracefully. Don't just unplug the machine.

Delete all frames in current project

d

This will delete all frames that you have taken in the current project. Important: there is no undelete option.
